## Ashtrees

Our seed is **obtained from and grown in the U.K.** whilst this is significantly more expensive than seed imported from abroad, it does mean that the trees that we produce are suitable for the UK climate.

Cell grown plants have **slow release fertilizers added** to the growing medium, this helps the tree in the 1<sup>st</sup> few years after planting, the growth and health of the tree is greatly increased compared to bare rooted plants.

Our plants are **grown in a controlled environment**, compact and even growth is achieved and results in stock that is easier to plant than bare rooted trees.

We do not cut the roots off our trees, **they are not damaged by heavy machinery and the plant is supplied with all the roots that it had throughout its time on the nursery resulting in a more fibrous root system, giving you better establishment success.**

Many of our customers now solely use cell grown plants. If you decide to do the same, I'm sure you will not be disappointed.

An \* next to the English name indicates that the plant is native to the UK as defined by the Forestry Commission.
