Ashtrees

Our seed is obtained from and grown in the U.K. whilst this is significantly more expensive than seed imported from abroad, it does mean that the trees that we produce are suitable for the UK climate.

Cell grown plants have slow release fertilizers added to the growing medium, this helps the tree in the 1st few years after planting, the growth and health of the tree is greatly increased compared to bare rooted plants.

Our plants are grown in a controlled environment, compact and even growth is achieved and results in stock that is easier to plant than bare rooted trees.

We do not cut the roots off our trees, they are not damaged by heavy machinery and the plant is supplied with all the roots that it had throughout its time on the nursery resulting in a more fibrous root system, giving you better establishment success.

Many of our customers now solely use cell grown plants. If you decide to do the same, I'm sure you will not be disappointed.

An * next to the English name indicates that the plant is native to the UK as defined by the Forestry Commission.
